Front End Engineer — UI / UX (Graduate)

MonoEdge · Pune (with occasional travel to customer sites)
Full-time · Graduate / entry-level · 2025 and 2026 graduates

About MonoEdge

MonoEdge builds an advanced intelligence layer for the Indian mid-market manufacturing sector. Our software behaves like an always-on analyst rather than another dashboard: it reads what is happening across a plant, connects production data to quality, energy, and cost, and tells the people running the floor what is going wrong and why — in English, Hindi, and Marathi.

We are a technically-driven, bootstrapped company defining a new category in industrial optimization.

About the role

The intelligence in our product is only as useful as the screen it arrives on. Our user is a plant owner or a shift supervisor who has been shown dashboards before and was disappointed — too many charts, not enough answers. The interface is where we either earn their trust or lose it.

As a Front End Engineer, you will build the parts of the product people actually look at: the reports, the alerts, and the views that take a hard industrial problem and make it legible in a glance. This is a UI/UX-focused role — clarity is the whole job. A screen that is beautiful but confusing has failed.

What you will do

- **Build product UI** in React and TypeScript, from small components up to full views.
- **Design data-dense interfaces** — charts, tables, and reports that present real production data honestly, including when the data is uncertain or incomplete.
- **Own the UX for non-technical users** — the person using this is running a factory, not reading documentation. Flows have to be obvious on the first try.
- **Handle multilingual, on-the-floor design** — screens that hold up in English, Hindi, and Marathi (Devanagari) and stay readable on a tablet in a bright, busy plant.
- **Maintain a small design system** with the Founder and the designer — a consistent set of components and styles.
- **Sweat the details** — empty states, loading, errors, and the difference between "no data" and "zero".

Who should apply

We are looking for a recent graduate in **any engineering discipline, Computer Science, or Design** — or a self-taught developer with work to show. The degree matters less than what you have built.

You are a strong fit if you have:

- Solid web fundamentals: **HTML, CSS, and JavaScript**, with real comfort in the browser. You can build a responsive layout by hand.
- **React** experience — at least one real interface you have built — and a willingness to work in **TypeScript**.
- A genuine eye for **UI/UX**: you notice spacing, alignment, and hierarchy, and you can explain why one layout reads more clearly than another.
- A preference for **clarity over cleverness** — you would rather a user understand a screen in one pass than admire an animation.
- Something to show: a personal, college, or freelance project you can walk us through and take responsibility for.

Nice to have (none required): any charting or data-visualisation work; Figma comfort; Devanagari or multilingual layout experience; an eye for performance; familiarity with Git and the command line.

> **A note on marks:** we do not screen on CGPA alone. A project you can explain, and a real eye for interface quality, count for more than a decimal point.

What you will learn and why join

- Ownership of real product surfaces early, working directly with the **Founder and senior team**.
- How to build interfaces for people whose job is not software, and how to present data honestly.
- A small, bootstrapped team where your work reaches a real customer quickly.

Details

Location	Pune, with occasional travel to customer sites
Type	Full-time, graduate / entry-level
Reports to	Founder and senior team
Eligibility	2025 and 2026 graduates; any engineering discipline or Design; basic coding knowledge

Selection process

1. **Apply online** through the role page (link below) — about ten minutes: your details, a few short screening questions, and one written question we read properly.
2. **Screening call** with the team.
3. **Technical + UI/UX discussion** — we will look at something you have built and talk through your interface judgment. Portfolios and live projects welcome.
4. **Conversation with the Founder.**

How to apply

Apply online: **https://careers.monoedge.in/frontend-engineer-a7f3d2/**

Or email your CV — and a link to your work — to **krishna@monoedge.in** with the role in the subject line.

Placement cells and college partners: you are welcome to share the link above directly with students. For campus drives or to schedule a session, please reach out to us at the contact below.
